

## How to choose the correct sack

### 1. What type of waste will go into the sack?

### 2. How much weight will the sack be required to hold?

### 3. What size bin is the sack required to fit?

Fit the refuse sack to the size of your bin. If the sack is too small, waste will spill out of the sack and into the bin. If the sack is too large, there will be overhanging sack outside the bin. Use the following two calculations to ensure you buy the right size sack.

To calculate the correct circumference:

Measure across the rim of your bin and compare to the depth (D) and width (W) of the refuse sacks in this catalogue.

To calculate the correct height:

Measure the height (H) of your bin and then add an additional seven inches of overhang for tying.
