

# How to connect a mop head to a mop handle

## Mop head & handle guide

Connecting your mop head to the handle is easy, but if done incorrectly will result in the mop head disconnecting when you are mopping.

### To connect push mops:

Place the handle into the slot on the mop head and push down firmly to ensure the handle is secure.

### To disconnect your push mop head:

Keep the mop head on the floor and secure with your feet. Carefully pull the handle out of the slot.

### To connect screw mops:

Place the end of the handle against the mop head connection and twist towards you. The handle should begin to screw securely onto the mop head.

### To disconnect your screw mop head:

Keep the mop head on the floor and secure with your feet. Twist the handle anti-clockwise until the mop head is disconnected.

## Multi-fit handle

By using a multi-fit connection handle you can easily change mop and broom heads to suit your application. The handle features a screw end, however it can also be used as a standard push mop for most mop heads. Look out for the multi-fit handle logo throughout the mopping pages.
