ECO to Go™ Reusable Cups

Made from renewable resources and reusable

Made from 80% rice husk (the brown outer shell that rice comes in) and 20% plant resin, the ECO to Go reusable cup is made entirely from renewable resources. About 125 million tonnes of rice husks are produced each year as an agricultural by-product, the ECO to Go cup sees part of this waste diverted from incineration to make reusable cups instead. Naturally insulating, the ECO to Go cup is dishwasher and microwave safe and can be custom printed.

Cup made from 80% rice husk & 20% plant resin

Lid & sleeve made from food grade silicone

For more information about our ECO to go reusable cups please contact:
