

Reusable & recyclable food service packaging

Featuring:

An exclusive Bunzl brand

catering supplies

**SUSTAINABLE
FUTURE**

Making hospitality happen for a sustainable future

Verive food packaging

Verive is a range of reusable food service packaging. Verive products are specifically designed for a circular take-use-return programme and are suitable for repeat cleaning in a dishwasher. After multiple reuse and at the end of its full lifespan, Verive products identified as recyclable should be placed in a dedicated recyclables bin to ensure they are sent to a material recovery facility for recycling.

The latest in reusables technology and exclusive brand product innovation, Verive is fit for multiple re-use without loss of function or hygiene. Designed for durability, long-term value and customer convenience and produced with the whole life-cycle properly considered, from point of manufacture to end of life.

Verive food packaging

Verive 360° is a market-leading service solution that helps you implement and utilise reusables in a circular system, at events, in-house or on-the-go. By providing innovative product tracking and a full wash and return facility, Verive 360° ensures reusables retain a full lifespan to deliver long-term value and optimum sustainability benefits.

Deposit return with QR code and/or RFID technology

Most reusables in the Verive range can be QR code and/or RFID (chip or sticker) technology enabled to enhance consumer engagement and facilitate automated product tracking in multiple reuse cycles.

Fully supported collect, wash and return system

All reusables in the Verive range can be collected, washed, and returned in a fully supported return system, ensuring longevity, and a practical and positive customer experience every time.

With the exception of silicone sleeves.

Responsibly sourced

Verive reusable food packaging is sourced and manufactured in an ethical and responsible way. We audit and manage our supplier performance against many commercial and social measures to ensure the products we source are fit for purpose with the relevant ethical and legal compliance. Taking a responsible approach to sourcing ensures customer peace of mind.

Reusable

When Verive reusable food packaging is used and reused appropriately for its full lifespan, it delivers significant sustainability benefits. This is because fewer virgin resources are needed to manufacture Verive reusables per application, cutting down end-of-life waste and the use of raw materials, and potentially reducing carbon footprint.

Verive food packaging

As part of our Sustainable Future programme we are building an exciting, exclusive brand range of reusable packaging that has the potential to play an important role in preventing waste and reducing carbon footprint.

Justin Turquet
Director of Sustainability
Bunzl Catering & Hospitality Division

Responsible choice

Sourced and manufactured to stringent supplier specifications, you will have confidence in the durability, long-term value and sustainability benefits of Verive reusables.

Carbon footprint

Using Verive reusable food packaging can significantly reduce carbon footprint compared to respective single-use plastic or paper food packaging, when used appropriately for its full lifespan.

Waste reduction

Verive reusable food packaging and Verive 360° service solutions, can help you cut down landfill and incineration waste, contributing to improved waste management.

Consumer appeal

Verive reusable food packaging appeals to consumers because it lets them know that you buy responsibly and ethically, employing innovation to implement sustainable solutions.

Hygienic and convenient

Products in the Verive range deliver a hygienic and convenient solution that is designed for durability, long-term value, and sustainability.

Legislation compliance

Adhering to existing and incoming legislation, Verive reusable food packaging provides alternatives to banned or restricted products.

Complete wash and return solutions

All reusables in the Verive range can be collected, washed and returned in a fully supported return system. A fully managed wash and return system may include:

Delivery of branded reusables

QR codes and RFID technology for tracking

Branded marketing support

Return bins/points provision

Third-party support on-site

Reusables collection from site

Lost reusables counted and replenished

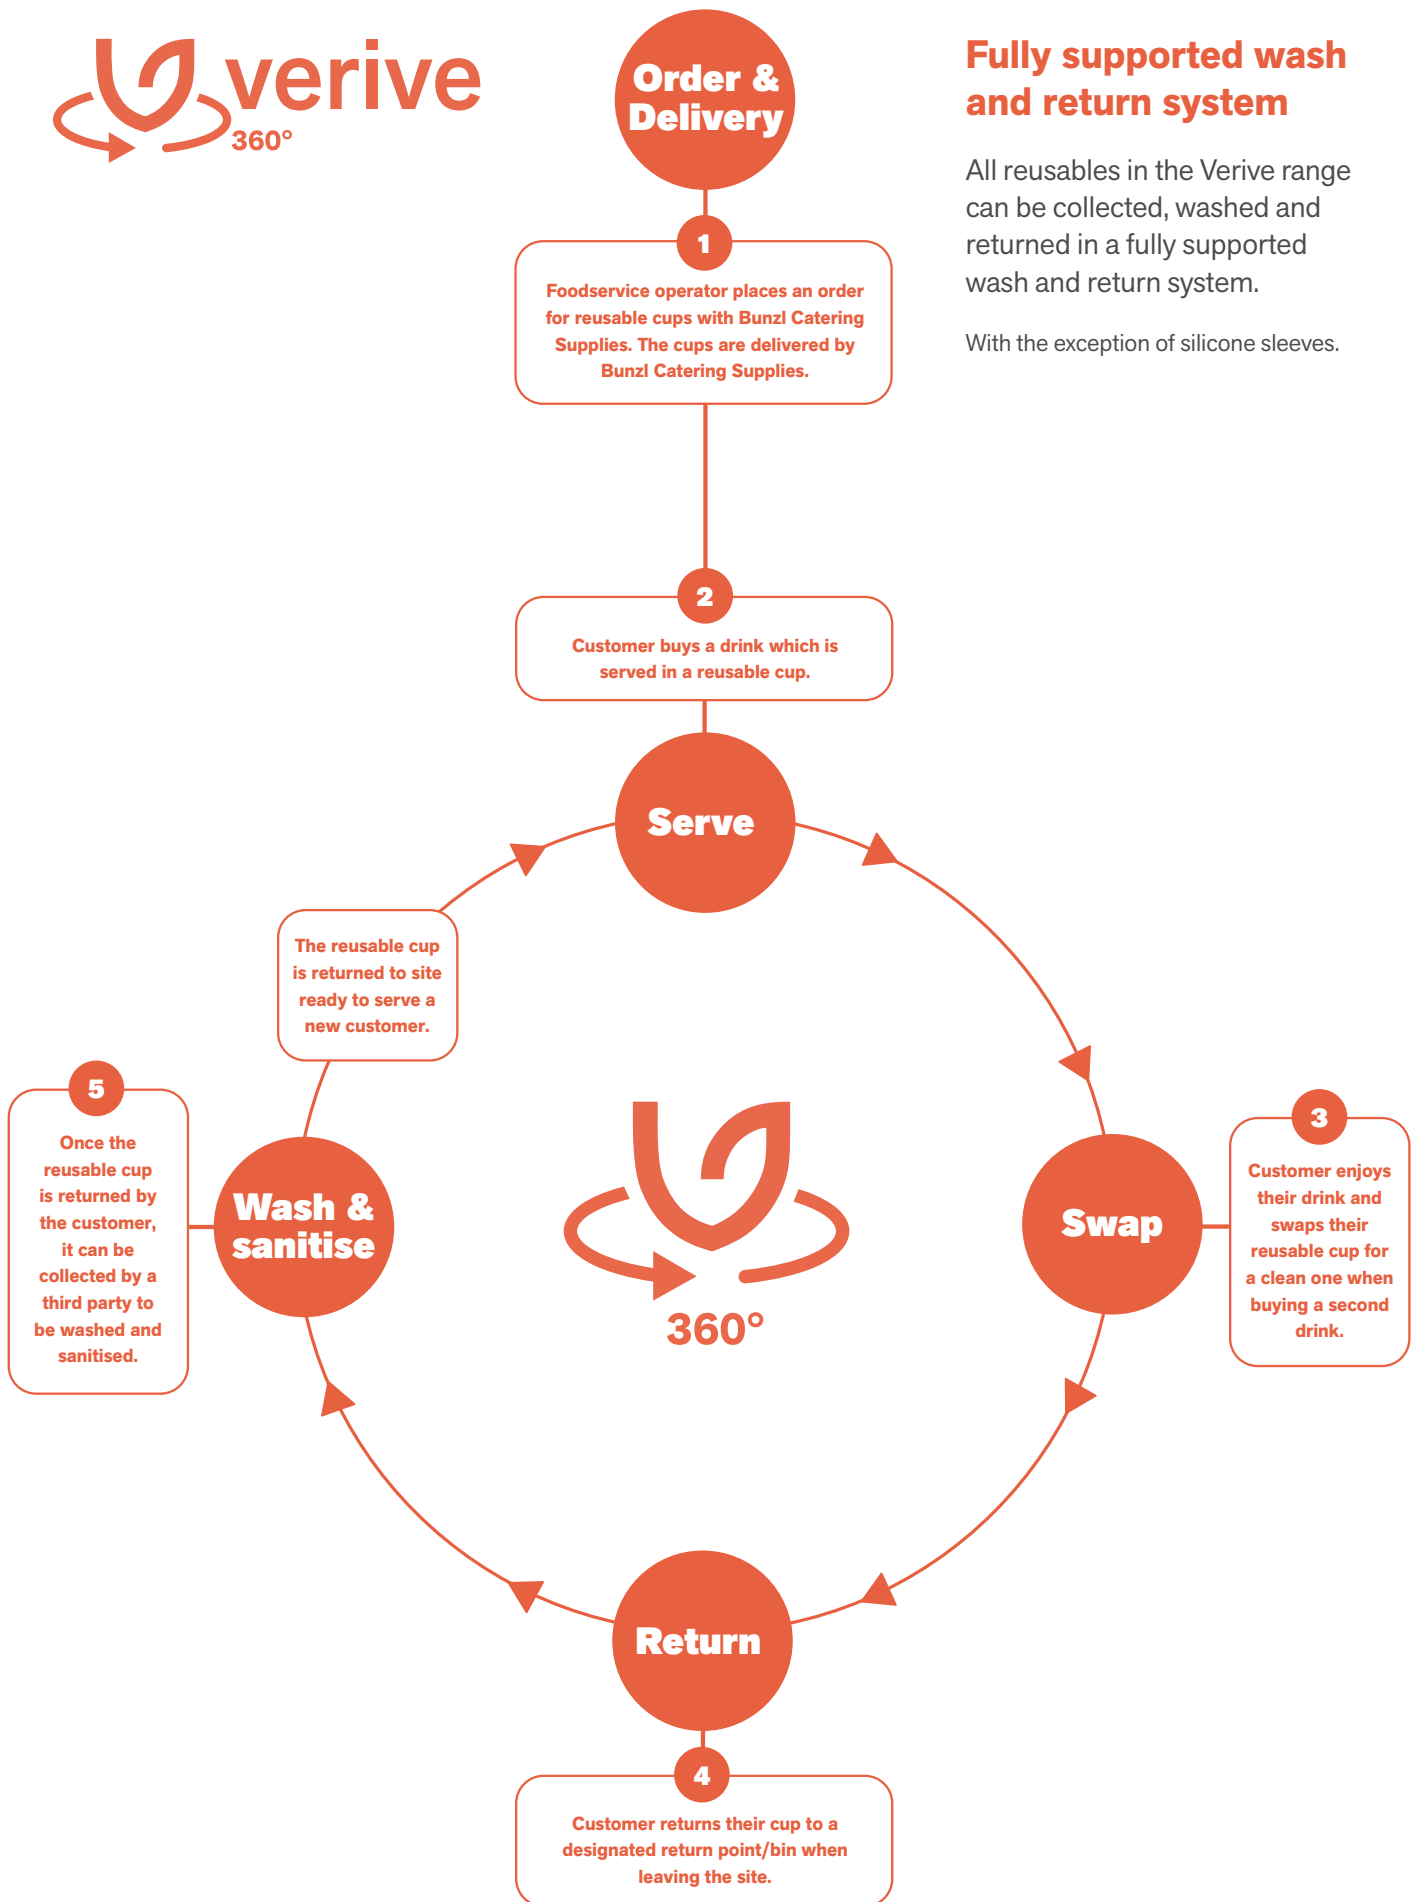

Reusables washed and sanitised

Clean reusables returned to site

Fully supported wash and return system

All reusables in the Verive range can be collected, washed and returned in a fully supported wash and return system.

With the exception of silicone sleeves.

Deposit return with QR code and/or RFID

Reusables in the Verive range can be QR code and/or RFID technology enabled to enhance consumer engagement and facilitate automated product tracking in multiple reuse cycles.

QR codes

QR codes are a type of two-dimensional barcode that can be read by a smartphone equipped with a suitable camera and software. QR code technology links customers to web-based apps for brand engagement and interaction, and can facilitate and manage deposit-based return schemes.

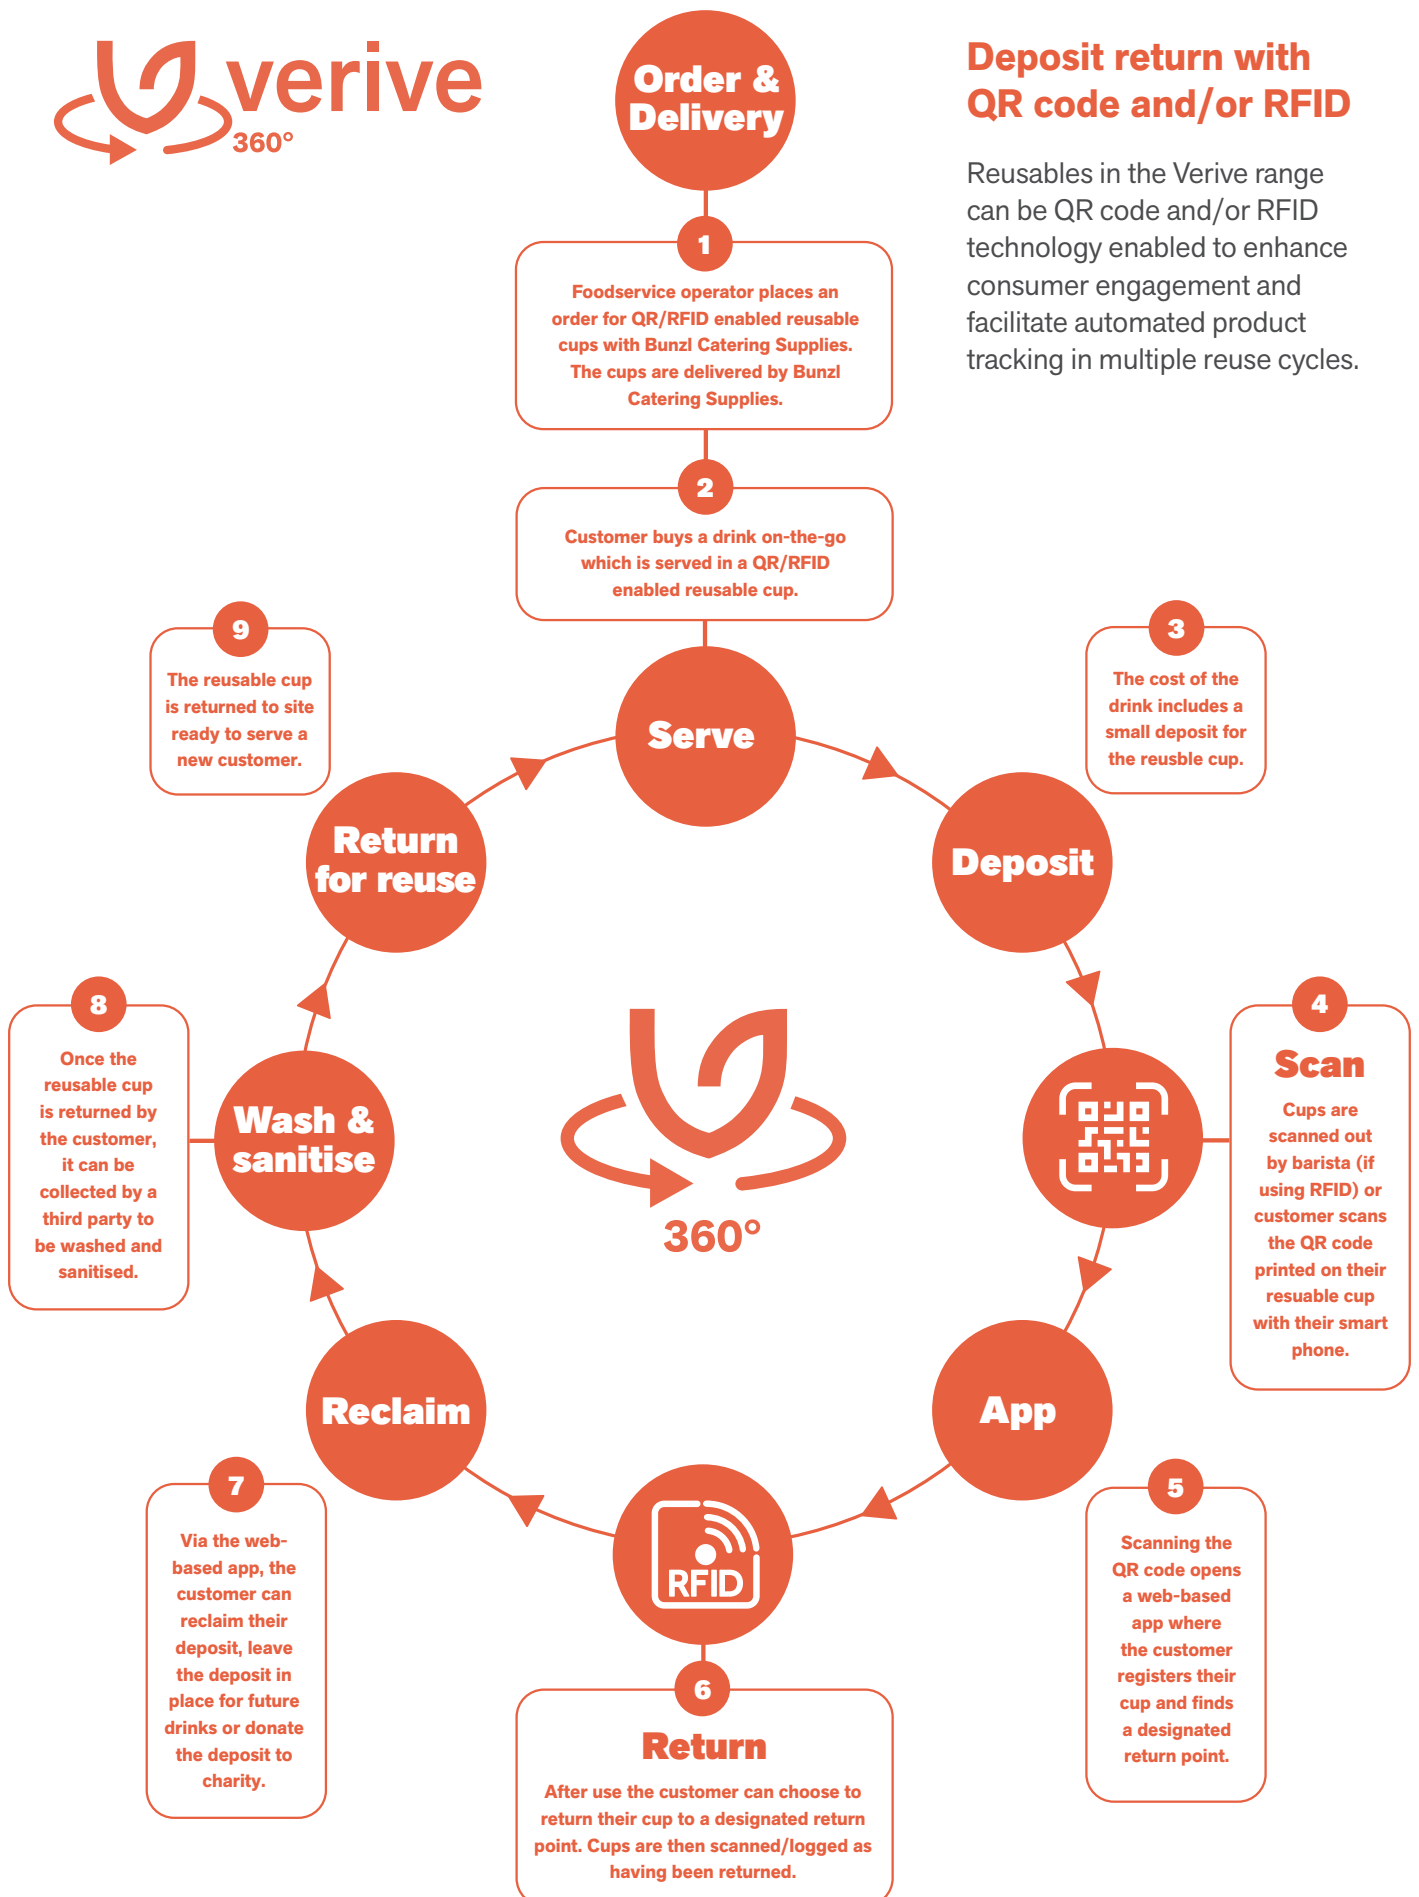

RFID tags

Using radio waves to passively identify a tagged object, RFID technology invisibly holds identifying information in unique machine-readable codes. RFID tags (applied as chips or stickers) collect rich data about the movement of assets within a reusables system, tracking returns in deposit-based return schemes and counting reuse cycles. RFID technology supports customer adoption and infrastructure implementation for multiple reuse cycles.

Deposit return with QR code and/or RFID

Reusables in the Verive range can be QR code and/or RFID technology enabled to enhance consumer engagement and facilitate automated product tracking in multiple reuse cycles.
