Sustainable food packaging solutions

We are helping our customers address their sustainability challenges

Committed to promoting material responsibility, and dedicated to helping our customers navigate an increasingly complex legislative landscape in food packaging, we have consolidated our three sustainable product brands into one comprehensive brochure.

Our 'Sustainable Food Packaging Solutions' brochure features our ReGen (recyclable), Sustain (renewable), and Verive (reusable) product brands – offering customers an unbiased choice of recyclable, renewable and reusable options. These exclusive brand ranges offer practical solutions for every stage of the product journey, from delivery to responsible disposal or reuse, helping you make informed choices for your business and customers.

Developed to help our customers address sustainability challenges and meet environmental goals with confidence, our sustainable product solutions are backed by rigorous analysis and offer clear and effective pathways to reduce waste, lower carbon footprint, and stay ahead of legislative requirements.

Our sustainable product brands

ReGen (Recyclable)

With increasing complexities in the UK's waste packaging reform and Extended Producer Responsibility (EPR) there is growing attention on recyclable consumer food packaging. The ReGen range is designed with these complexities in mind, providing recyclable food service packaging that complies with On-Pack Recycling Label (OPRL) guidelines and is classed as Green or Amber products by DEFRA's Recycling Assessment Methodology (RAM). When cleared of food waste and placed in dedicated recyclables bins, ReGen can be processed through Material Recovery Facilities (MRFs). By focusing on recyclability, ReGen supports businesses in meeting legislative requirements and contributing to improving recycling rates in line with Government guidance.

Sustain (Renewable)

In food service packaging, the term 'compostable' can sometimes be misused, leading to greenwashing or confusion. Our approach is to provide a clear framework for the Sustain range, which offers renewable food service packaging made from natural resources. Where products are described as compostable, they are made from materials that meet EN13432 standards. This means that these items are designed to support the circular economy when disposed of in dedicated bins and taken to composting facilities, where they will break down into compost within 12 weeks. Sustain products are ethically sourced, responsibly manufactured, and clearly labelled to ensure confidence in composting claims, helping businesses find the best waste management solutions.

Verive (Reusable)

Our award-winning Verive range focuses on reusables, offering food service packaging designed for durability and long-term use in catering and hospitality environments. Dishwasher-safe and built for multiple reuse cycles, Verive products maintain hygiene and functionality throughout their lifespan. Insights from lifecycle assessments conducted with the University of Exeter* provide valuable guidance on the best environments for using these products. The range is supported by Verive 360°, a service solution that simplifies the implementation of reusables through features like product tracking and a comprehensive wash-and-return service, making it easy to integrate reusables into food service operations at events, in-house or on-the-go.

Sustainable Future programme

Making hospitality happen for a sustainable future

Our Sustainable Future programme drives communication, collaboration, and stakeholder engagement on a range of corporate sustainability issues and is underpinned by long-term objectives to deliver UN Sustainable Development Goals (SDGs) which provide a clear path for continual environmental improvement.

In our pursuit of a sustainable future for all, we are driven by a collective focus on key areas such as environmental stewardship, carbon reduction, and delivering social value. We work with our people, customers, and suppliers to provide invaluable sustainability insight through rigorous analysis, measurement, and reporting.

Our market-leading suite of three sustainable product brands: ReGen (recyclable), Sustain (renewable), and Verive (reusable), provide customers with an un-bias choice of innovative product solutions that can reduce waste, lower carbon footprint, and meet sustainability targets.

ReGen food packaging

ReGen is a range of recyclable foodservice packaging in line with OPRL (on-pack recycling labels) guidelines. ReGen products are suitable for direct contact with food. All recyclable products should be cleared of food and liquid waste and placed in a dedicated recyclables bin to ensure they are sent to a MRF (Material Recovery Facility) for recycling.

When sent to a MRF (Material Recovery Facility) for recycling, ReGen food packaging diverts waste from landfill by giving the recyclable material a chance for a second life.

Responsibly sourced

ReGen reusable food packaging is sourced and manufactured in an ethical and responsible way. We audit and manage our supplier performance against many commercial and social measures to ensure the products we source are fit for purpose with the relevant ethical and legal compliance. Taking a responsible approach to sourcing ensures customer peace of mind.

Recyclable

ReGen is a range of recyclable foodservice packaging in line with OPRL (on-pack recycling labels) guidelines. When sent to a MRF (Material Recovery Facility) for recycling, ReGen food packaging can help you increase your recycling rates and divert waste from landfill.

ReGen food packaging

Responsible choice

Sourced ethically to our stringent specifications, ReGen food packaging is suitable for recycling solutions in the UK.

Recyclable

Recyclable in line with OPRL (on-pack recycling labels) guidelines. On-pack recycling labels are used widely throughout UK packaging to deliver a simple and consistent message that encourages accurate recycling.

Waste reduction

When sent to a MRF (Material Recovery Facility) for recycling, ReGen food packaging can help you increase your recycling rates and divert waste from landfill.

Consumer appeal

ReGen food packaging appeals to consumers because it lets them know that you buy responsibly, ethically and sustainably, with a viable end of life solution in mind.

Legislation compliance

Adhering to existing and incoming legislation, ReGen food packaging provides alternatives to products affected by bans or restrictions.

Bespoke print

ReGen food packaging can be bespoke printed with your business branding, sustainability messaging, and recycling instructions, including QR codes.

Sustain food packaging

Sustain is a range of food service packaging made from renewable resources and/or compostable with EN13432 certification. Sustain products labelled compostable are fully compostable in commercial composting facilities and will break down into reusable compost within 12 weeks. All compostable products should be placed in a dedicated compostables bin to ensure they are sent for composting.

Responsibly sourced

Sustain food packaging is sourced and manufactured in an ethical and responsible way. We audit and manage our supplier performance against many commercial and social measures to ensure the products we source are fit for purpose with the relevant ethical and legal compliance. Taking a responsible approach to sourcing ensures customer peace of mind.

Renewable

Sustain food packaging is made up of components or materials derived from natural sources that can be managed responsibly so that they will replenish or regenerate. These materials are usually generated from plants or trees and can be certified to industrial composting standard EN13432 or may have a home composting certificate.

Compostable

Sustain food packaging certified EN13432 is engineered to break down into organic matter when disposed of correctly. EN13432 certification is a stringent standard recognized worldwide. It gives clear information on how to dispose of a product so that it may undergo a controlled and efficient decomposition process in industrial composting facilities.

Sustain food packaging

Responsible choice

EN13432 certification for compostability gives you confidence in the materials and end of life solutions for Sustain food packaging.

Waste reduction

Sustain food packaging can help you cut down landfill and incineration waste, contributing to improved waste management.

Renewable materials

Composting Sustain food packaging materials means supporting soil systems and helping to regenerate renewable materials.

Consumer appeal

Sustain food packaging appeals to consumers because it lets them know that you buy responsibly, ethically and sustainably.

Resource conservation

Responsibly sourced and utilizing renewable resources, Sustain food packaging reduces reliance on fossil fuel-derived materials.

Legislation compliance

Adhering to existing and incoming legislation, Sustain food packaging provides alternatives to products affected by bans or restrictions.

Sustain PLA lined paper hot cups and sip lids

When disposed of in a dedicated waste stream and sent to commercial composting facilities, Sustain™ hot cups and CPLA sip lids will fully compost within 12 weeks. Single and double wall cup options come in a variety of sizes, plain or printed with the Sustain logo.

Material: MIXED - Paper cup with a PLA (Polylactic Acid) lining with CPLA sip lid

Certification: Compostable EN13432

Temperature: Max 115°C

Uses: Hot drinks – tea, coffee and hot chocolate

Verive food packaging

Verive is a range of reusable food service packaging. Verive products are specifically designed for a circular take-use-return programme and are suitable for repeat cleaning in a dishwasher. After multiple reuse and at the end of its full lifespan, Verive products identified as recyclable should be placed in a dedicated recyclables bin to ensure they are sent to a material recovery facility for recycling.

Responsibly sourced

Verive reusable food packaging is sourced and manufactured in an ethical and responsible way. We audit and manage our supplier performance against many commercial and social measures to ensure the products we source are fit for purpose with the relevant ethical and legal compliance. Taking a responsible approach to sourcing ensures customer peace of mind.

Reusable

When Verive reusable food packaging is used and reused appropriately for its full lifespan, it delivers significant sustainability benefits. This is because fewer virgin resources are needed to manufacture Verive reusables per application, cutting down end-of-life waste and the use of raw materials, and potentially reducing carbon footprint.

Recyclable

After multiple reuse and at the end of its full lifespan, Verive products identified as recyclable should be placed in a dedicated recyclables bin to ensure they are sent to a material recovery facility for recycling.

Verive food packaging

Verive 360° is a market-leading service solution that helps you implement and utilise reusables in a circular system, at events, in-house or on-the-go. By providing innovative product tracking and a full wash and return facility, Verive 360° ensures reusables retain a full lifespan to deliver long-term value and optimum sustainability benefits.

Automated product tracking

Most reusables in the Verive range can be QR code and/or RFID (chip or sticker) technology enabled to enhance consumer engagement and facilitate automated product tracking in multiple reuse cycles.

Supported return system

All reusables in the Verive range can be collected, washed, and returned in a fully supported return system, ensuring longevity, and a practical and positive customer experience every time.

Responsible choice

Sourced and manufactured to stringent supplier specifications, you will have confidence in the durability, long-term value and sustainability benefits of Verive reusables.

Carbon footprint

Using Verive reusable food packaging can significantly reduce carbon footprint compared to respective single-use plastic or paper food packaging, when used appropriately for its full lifespan.

Waste reduction

Verive reusable food packaging and Verive 360° service solutions, can help you cut down landfill and incineration waste, contributing to improved waste management.

Consumer appeal

Verive reusable food packaging appeals to consumers because it lets them know that you buy responsibly and ethically, employing innovation to implement sustainable solutions.

Hygienic and convenient

Products in the Verive range deliver a hygienic and convenient solution that is designed for durability, long-term value, and sustainability.

Legislation compliance

Adhering to existing and incoming legislation, Verive reusable food packaging provides alternatives to banned or restricted products.
